ELECTROPHORESIS

Theory, Methods and Applications

Edited by MILAN BIER, *Fordham University, New York and Institute of Applied Biology, Inc., New York*

January 1959, about 580 pp., illus., approx. $15.00

ELECTROPHORESIS has exerted an influence on biochemistry, physiology, and clinical medicine that is equalled by few other experimental techniques. This comprehensive work presents critical and penetrating analyses of the fundamental principles involved in electrophoresis, the problems encountered therein, and indications of their solutions.

The volume will be indispensable to all experimental and theoretical workers in electrophoresis, and should prove of value to all concerned with the broad fields of proteins, polyelectrolytes, and other colloids.

CONTENTS:

ARNE TISELIUS, Introduction

Theory

J. TH. G. OVERBEEK and J. LIJKLEMA, Electric Potentials in Colloidal Systems

K. LINDERSTRØM-LANG and S. O. NIELSEN, Acid-Base Equilibria of Proteins

L. G. LONGSWORTH, Moving Boundary Electrophoresis—Theory

Methods and Applications

L. G. LONGSWORTH, Moving Boundary Electrophoresis—Practice

CH. WUNDERLY, Paper Electrophoresis

HENRY J. KUNKEL and RODES TRAUTMAN, Zone Electrophoresis in Various Types of Supporting Media

MILAN BIER, Preparative Electrophoresis without Supporting Media

R. A. BROWN and SERGE N. TIMASHEFF, Applications of Moving Boundary Electrophoresis to Protein Systems

DAN H. MOORE, Clinical and Physiological Applications of Electrophoresis

CHARLES C. BRINTON, JR. and MAX A. LAUFFER, The Electrophoresis of Viruses, Bacteria, and Cells and The Microscope Method of Electrophoresis

THEODOR WIELAND, Applications of Zone Electrophoresis
